ValueExpressTM Cab Series

EID Elevator Systems. Simplified.

How It Works

STEP 1

Cab Wall Panel Design Options

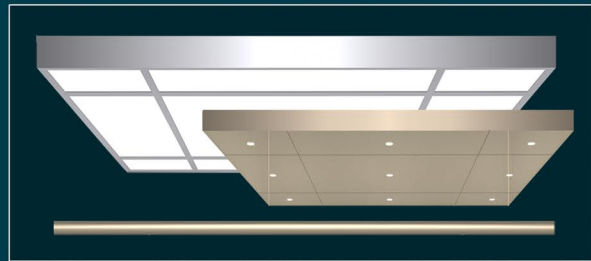

Select your wall panel design segmentation and reveal type ranging from 1/4" reveals, open reveals, and inlay trim profiles with binders in multiple patterns and colors.

STEP 2

Ceiling and Handrail Selection

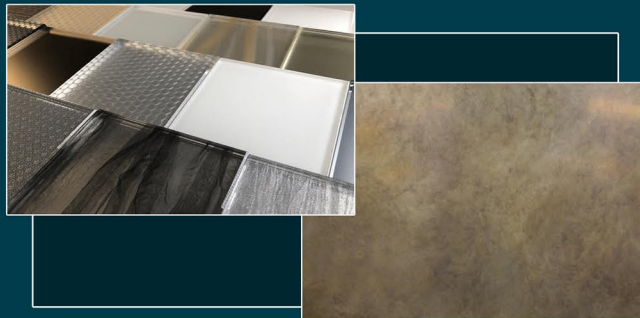

Illuminate the cab with our ceiling frame or island type ceiling options paired with LED downlights and indirect perimeter lights. Select your desired handrail profile.

STEP 3

Material Selection

Choose from EID's extensive library of architectural finishes, featuring high impact laminates, wood veneers, architectural glass, textured metals and many more.

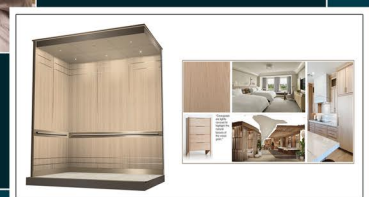

STEP 4

Connect with an EID Design Expert

Work with an EID Design Engineer to bring your elevator cab vision to life.

Allow us to connect your vision and budget for a custom, project specific, cab interior.

PROJECT SPECIFIC RENDERINGS AND DESIGN ASSISTANCE

As part of our services, Elevator Interior Design provides high-quality, project-specific renderings that bring elevator interior concepts to life in the early design stage. Our detailed visualizations clearly communicate design intent, material selections, finish combinations, and intricate architectural details, allowing all project stakeholders to fully understand the final vision.

The EID renderings serve as a valuable collaboration and approval tool for architects, designers, developers, contractors, building owners, and elevator companies. By viewing realistic representations of the proposed interiors, teams can evaluate design options, refine details, and make informed decisions early in the process, reducing uncertainty and minimizing costly changes during construction.

The result is a more streamlined design and finish selection process that helps maintain project budgets, improves coordination among trades, and supports schedules through faster approvals and clearer communication.

For elevator companies, our rendering services are also a powerful sales and marketing tool.

Whether supporting new construction, service opportunities, or modernization, professional renderings help customers visualize the finished product, increase confidence in proposed solutions, and improve project close rates.

By transforming concepts into compelling visual presentations, Elevator Interior Design helps elevate both the customer experience and the sales process.

Elevator Interior Design Pierces the 'Fourth' Wall

The front wall in an elevator cab, is defined by the cab door panels, the push button, the transom and the 'return panel'. Currently, national elevator company finish offerings for these components are limited to satin stainless steel and possibly, satin bronze.

Architects, designers, and end users spend tens of thousands of dollars developing unique cab interior finish walls, ceilings, and lighting systems, which are statements and extensions of the lobby finish.

At Elevator Interior Design (EID), we specialize in modifying the elevator companies cab front or 'fourth' wall with architectural finishes, creating a complete custom cab experience. We extend the finishes onto the cab front wall and door panels with a wide range of matching and complimentary materials that include etched, textured, oxidized, blackened and mirror metals and laminates.

Why settle for anything less?

SWING RETURN PANEL FACINGS

CUSTOM LASER CUT FACINGS TO REFACE THE EXISTING SWING RETURN PANELS IN STAINLESS STEEL, BRONZE OR OTHER HIGH END ARCHITECTURAL MATERIALS

DOOR PANEL FACINGS

STANDARD OR CUSTOM ETCHED, TEXTURED DOOR PANEL FACINGS AVAILABLE IN STAINLESS STEEL, BRONZE OR OTHER HIGH END ARCHITECTURAL MATERIALS

STATIONARY RETURN PANEL FACINGS

FORMED RETURN PANEL FACINGS TO REFACE EXISTING STATIONARY RETURN PANELS WITH ACCOMMODATIONS FOR THE NEW APPLIED CAR STATION BOX AND FACEPLATE
